Agitech's primary mission is to provide clients with exceptional and highly knowledgeable professionals. Staff augmentation is an outsourcing strategy which is used to quickly staff a project and bring improved efficiency and effectiveness into the work process. The technique consists of evaluating existing staff and determining which additional skills are required. The advantage of this approach is that it leverages existing resources as well as utilizing outsourced services.

Agitech is able to manage the staff augmentation activities of a company for full time, contract or contact to full time employees. We can deliver a single resource or an entire team, an individual project manager – or a project, manager with a team, a team of consultants with Agitech's oversight and project management. The services that our augmentation consultants can provide include:

- Application Development & Integration
- Application Maintenance
- Data Warehousing Analysis, Development & Migration
- Database Design, Administration & Maintenance
