

Agitech provides a comprehensive suite of migration service offerings to transition client software applications and infrastructure to another operating environment. Established over many years of successful experience with migration projects, our proven, cost-effective migration processes are designed to reduce risk, cost and time across the entire migration life cycle. Fully backed up by our support call center services, our migration solutions provide the highest possible value combined with long-term support guarantees. Agitech's migration services include:

- Legacy Re-engineering
- Database Migration
- User Interface Migration
- Language Migration
- Code Analysis
- Application Conversion
- Business Rule Extraction

We have created a cohesive series of migration processes, refined and developed over many successful projects, to ensure continuing success in our migration solutions. Our comprehensive set of complementary services cover the full migration life cycle from initial analysis, assessment, proof-of-concept, implementation, QA testing, technical transfer, production deployment and post-migration support and lead into our fully managed long-term system administration and support call center services. These services follow a rigorous, proven methodology designed to deliver an end-to-end solution at the lowest possible risk. Fully supported by a set of automated tools and utilities and backed up by our QA testing and support services, the Migration Services provide the optimum approach to deliver a risk-free migration solution for existing applications and infrastructure.
